PROFESSIONAL SUMMARY

Backend engineer with production experience in transactional systems, API design, and performance debugging. Background includes integrating third-party payment services into multi-channel business platforms, building reliable healthcare infrastructure, and developing retrieval systems evaluated with real information retrieval metrics.

Relevant Experience

SYNC360

Backend Engineer

Remote

May 2026 – Present

- Built a multi-tier customer loyalty system that enabled businesses to reward repeat purchases and drive customer retention, contributing to a 23% increase in repeat-customer rate across businesses.
- Integrated an external Buy-Now-Pay-Later (BNPL) service into the core checkout flow, implementing transactional state management, webhook listeners, and retry handling while protecting businesses from payment-default exposure.
- Profiled and optimized PostgreSQL queries using composite indexes, cutting p95 query latency by 42% on high-volume sales endpoints.
- Built automated asynchronous ETL reporting pipelines using Celery and openpyxl, pulling sales, expense, and inventory data into scheduled monthly Excel reports and eliminating 12+ hours of manual bookkeeping weekly.

BLUEAPRIL TECHNOLOGIES

Intern Technologist

Remote

Oct. 2025 – April 2026

- Designed schema for multi-tenant cooperative management platform using PostgreSQL Row-Level Security (RLS) to enforce strict tenant data boundaries.
- Built administrative dashboards and REST endpoints reducing onboarding cycle by 40%; conducted peer reviews across 40+ PRs enforcing PEP8 standards.

TOLTIMEDCARE

Backend Engineer

Remote

Aug. 2024 – Present

- Maintained backend uptime (99.9%) and reliability for core healthcare workflows, including patient appointment booking, telehealth consultation routing, and medical records.
- Diagnosed and resolved database N+1 query bottlenecks and connection pool contention, reducing p95 response times from 1.3s to under 220ms under concurrent loads.

Education

LEAD CITY UNIVERSITY

B.Sc. in Software Engineering, First Class Honours, CGPA: 4.90/5.00

Ibadan, Nigeria

Sept 2022 - July 2026

Relevant Coursework: Distributed Systems, Data Structures & Algorithms, Database Management Systems, Software Architecture, Machine Learning, Information Retrieval, Cloud Computing

Technical Skills & Projects

Programming Languages: Python, TypeScript, JavaScript, SQL, Bash | **Frameworks:** FastAPI, Django, NestJS, Express.js Next.js

Technologies & Tools: PostgreSQL (pgvector), Redis, Docker, Celery, Git, GitHub Actions (CI/CD), AWS, RESTful APIs.

Kitsune Desktop Utility (Open source project)

August. 2026 – Present

Engineered and maintain a zero-dependency Linux utility that converts web apps into sandboxed desktop applications using Firefox Gecko and XWayland.

Kontributa: Automated Fintech Contribution Platform

July. 2026 – Sept. 2026

Built a fintech contribution platform with automated bank-transfer verification, idempotent webhooks, Redis locks, partial payments, and double-entry ledgers across Monnify and Paystack.

Sheltly: AI Semantic Search & Explainable Ranking Engine (Undergraduate Final Year Research Project)

Jan. 2026 – July 2026

Architected an AI search engine using Sentence-BERT, PostgreSQL pgvector, and explainable SHAP ranking, with Redis-cached Haversine filtering achieving <80ms latency across 10K+ records and 0.84 NDCG@10, 0.79 MAP, and 0.88 MRR.

Leadership

Techbridgers NG

Oyo State, Nigeria

Academic Peer Tutor & Technical Mentor

July. 2023 – June 2026

Taught Python programming to secondary school students across public schools, leading hands-on lessons and guiding them through a coding project.
